A;Accession: B25971
                                                                                                                  A;Map position: 6p21.3-6p21.3
A;Introns: 21/3; 99/3; 346/1; 390/1; 424/1; 470/1; 502/3; 542/1; 593/2; 619/1; 652/3; A;Note: the list of introns may be incomplete
A;Note: gene is located in the major histocompatibility complex, class III region
C;Complex: complement factor B initially forms an inactive complex with complement factor C3b forming active C3/C5 convertase; Ba is released
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A;Status: preliminary

Anthrax toxin protective antigen (PA) binds to the ATR at a von Willebrand factor A domain located in the extracellular domain of ATR. The invention provides ATR polypeptides and polynucleotides, vectors, host cells, and transgenic and knock-out animals. It also provides methods for identifying molecules that bind the ATR and which reduce the toxicity of anthrax toxin. A claimed method for treating anthrax in a human or animal involves administering an agent that inhibits binding between PA and ATR at a level effective to reduce the severity of anthrax. Suitable agents include ATR or a PA-binding fragment of ATR, a PA-binding polypeptide at least 80% identical to these, a fusion protein, a monoclonal or polyclonal antibody, a polysaccharide, a lipid or a

The genes and their secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy.

CC Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 28 genes, compared to the new genes. Specific uses are described for each of the 28 genes, concert, tumours, foetal and developmental abnormalities, can disorders, cancer, tumours, foetal and developmental abnormalities, concert, tumours, foetal and developmental abnormalities, consisted disorders, diseases of the immune system, AIDS, autoimmune constitute disorders (e.g., Alaheimer's disease, Parkinson's disease), consistive disorders (e.g., Alaheimer's disease, Parkinson's disease), consistive disorders, schizophrenia, asthma, skin disorders (e.g., pregnancy-related disorders, and therosclerosis, cardiovascular disorders, cangiogenic disorders, kidney disorders, gastrointestinal disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell correlates, and in chemotaxis, and can be used as a food additive or prevent skin aging due to sumburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to reservative to moder or supporting and can be used as a food additive or an analysis of the for a creary tissue of the for a supporting can also be used to an analysis or binding the supporting cell culture of primary tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           foetal abnormality; developmental abnormality; haematopoietic disorder; immune system disorder; AIDS; autoimmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; AIZheimer's disease; Parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; anglogenic disorder; kidney disorder; gastrointestinal disorder; pregnancy-related disorder; cell culture; endocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive; gene therapy; binding partner identification;
                                                                                 preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAD05300-AAD05379 represent cDNAs corresponding to 28 human secreted protein genes, and AAE01436-AAE01513 represent the proteins they encode. AAE01514-AAE01544 represent human secreted protein fragments or variants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New nucleic acid molecules encoding 28 human secreted proteins diagnosing, preventing, treating or ameliorating medical conditused as food additives or preservatives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      05-NOV-1999; 99US-0163581P. 30-JUN-2000; 2000US-0215133P.

                     The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HA, also known as human serum albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shalf-life of protein X, and may increase its biological in vitro/in vivo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           human serum albumin; HSA; cancer; reproductive disorder; digestive disorder; immune disorder; endocrine disorder; haematopoietic disorder; neural disorder; connective disorder; cytostatic; antiinfertility; antiinflammatory; antiulcer; cytostatic; anti-HIV; antidiabetic; haemostatic; nootropic;

preventing

```
or ameliorating diseases or disorders e.g. cancer, anemia, arthritis asthma, inflammatory bowel disease or Alzheimer's disease.
SEQ ID NO 621; 279pp; English.
```

CC disorder in a pattent comprising the step of administering the albumin CC (tusion protein; a method of treating a patient with a disease or disorder that is modulated by Therapeutic protein: X, or its fragment or variant; CC a method of extending the shelf life of Therapeutic protein: X, or its fragment or variant; CC a method of extending the shelf life of Therapeutic protein: X, or its comprising a polymucleotide comprising the nucleic acid molecule comprising a polymucleotide comprising the nucleic acid molecule of the albumin fusion protein. The comprising the nucleic acid molecule of the albumin fusion protein. The call comprising the nucleic acid molecule of the albumin fusion protein. The call comprisities: cytostatic, antianaemic, antiarthritic, antiasthmatic, antiatities: cytostatic, antianaemic, antiapout, antiapout, antiatic, antiacterial, costeopathic, dermatological, antigout, immunomodulator, antiarrhythmic, cardiant, nootropic, antilpaemic, nephrotropic, uropathic, anabolic, hypertensive, and vulnerary. The albumin fusion protein nucleic acid may be used in gene therapy to treat disorders. The albumin fusion protein acid may compressed in gene therapy to treat disorders. The albumin fusion protein is useful for diagnosing, treating, preventing or ameliorating diseases or compressive, and colon, bone, breast, liver or lung cancer), completed chaeses (e.g. anaemia, Hodgkin's disease, acute lymphocytic anaemia, multiple myeloma, arthritis, asthma, AIDS, controlled con Sachs disease), excretory diseases (e.g. urinary incontinence, urinary tract infections or renal disorders), neural or sensory disease (e.g. Alzheimer's disease, Parkinson's disease, cerebral malaria, meningitis, cerebellar ataxia, attention deficit disorder, autism or obsessive compulsive disorder), respiratory disease (e.g. emphysema, lung cancer or occupational lung disease), endocrine diseases (e.g. diabetes, Addison's disease or glomerulonephritis), digestive diseases (e.g. portal pypertension, irritable bowel disease, gastric atrophy or pancreatitis) or connective tissue or epithelial diseases (e.g. Crohn's disease, sclaroderma, wound healing or epithelial diseases (e.g. Crohn's disease, sclaroderma, wound healing or epithelial diseases bullosa). This sequence represents a therapeutic protein X relating to the albumin fusion protein of the invention. The sequence listing data for this specification was dowloaded from the USPTO website. or cachexia), cardiovascular disease (e.g. rhabdomyomas, heart disease, arrhythmia, cardiac arrest, heat valve disease, hypernatraemia or hyponatraemia), mixed foetal diseases (e.g. foetal alcohol syndrome, pown's syndrome, Patau syndrome, Turner's syndrome, Apert syndrome or Tay Sachs disease), excretory diseases (e.g. urinary incontinence, urinary Paget's disease, ther relates to: a composition comprising the albumin fusion protein a pharmaceutical carrier; a kit comprising the composition of the umin fusion protein formula; a method of treating a disease or systemic lupus erythematosus, to a novel albumin fusion protein. gout, muscular dystrophy The invention

                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel fusion polypeptide comprising a von Willebrand factor A-like domain (vWF) amino acid sequence and an amino acid sequence heterologous to the vWF. The polypeptide of the invention demonstrates antibacterial activities whilst the composition and methomay be useful in preventing or ameliorating the symptoms of cutaneous and/or inhalation anthrax. The current sequence is that of the human TANGO 197 Ig mutated fusion protein of the invention.

                                                                                                                                                                                                                                                                ameliorating domain (vWF) to the vWF.
                                                                                     The invention describes a fusion polypeptide comprising a von Willebrand factor A-like domain (vWF) amino acid sequence and an amino acid sequence heterologous to the vWF. Also described are: a method of preventing or ameliorating a symptom of anthrax in a subject thought to be at risk for exposure to or suspected of having been exposed to Bacillus anthracis; and a pharmaceutical composition comprising the novel fusion polypeptide. The composition and method are useful in preventing or ameliorating symptoms of cutaneous and/or inhalation anthrax. This is the amino acid sequence of a fusion protein comprising mouse TANGO197 and immunoglobulin (19) that can be used to treat exposure to or prevent a symptom of
                                                                                                                                                                                                                                                                          New TANGO 197 and/or TANGO 216 fusion polypeptides for preventing or ameliorating symptoms of anthrax comprises a von Willebrand factor A-like domain (vWP) amino acid sequence and an amino acid sequence heterologous

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      02-AUG-2000;
11-AUG-2000;
11-APR-2001;
The invention relates to an isolated molecule comprising an antibody variable region which specifically binds to an extracellular domain of a tumour endothelial marker (TEM) protein selected from ABB90732, ABB90740, ABB90749, ABB90750 and ABB90769. The antibodies which bind to TEM proteins have cyrostatic, immunostimulant and antianglogenic activity. They are useful for inhibiting tumour growth, neoanglogenesis in subjects bearing a vascularised tumour, polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis and psortiasis. Human, mouse and rat TEM genes and the encoded proteins (ABL92075-ABL92141 and ABB90721-ABB90789) are disclosed, as are marker oligonucleotide sequences: tumour endothelial markers (TEM) ABL91996-ABL92041 and ABL92143-ABL92191; normal
                                                                                                                                                                                                                                                                                                                                                                                                     An isolated molecule comprising an antibody variable region which specifically binds to an extracellular domain of a tumor endothelial marker (TEM) protein, useful for inhibiting tumor growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; mouse; rat; TEM; tumour endothelial marker; NEM; PEM; normal endothelial marker; pan-endothelial marker; immunostim antiangiogenic; tumour; neoangiogenesis; vascularised tumour; polycystic kidney disease; diabetes; retinopathy; rheumatoid;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              St Croix
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human Tumour Endothelial Marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       30-MAY-2002

The antibodies which bind to TEM proteins have cytostatic, immunostimulant and antianglogenic activity. They are useful for inhibiting tumour growth, neoanglogenesis in subjects bearing a vascularised tumour, polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis and psoriasis. Human, mouse and rat TEM genes and the encoded proteins (ABL92075-ABL92141 and ABB90721-ABB90789) are disclosed, as are marker oligonucleotide sequences: tumour endothelial markers (TEM) ABL91956-ABL92041 and ABL92143-ABL92191; normal endothelial markers (NEM) ABL92042-ABL92074; and pan-endothelial markers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is the protein sequence of a human surface-bound CC anthrax toxin receptor (ATR), previously designated TEM6, and identified CC following a database screening using a newly isolated human surface-bound CC ATR (see ABP54903). The present sequence differs from the newly isolated CC human ATR only in the cytoplasmic domain (221 rather than 25 amino acids CC long), suggesting differential splicing of a primary mRNA transcript. CC Anthrax toxin protective antigen (PA) binds to these ATRs at a von CC willebrand factor A domain located in the extracellular domain of ATR. CC The invention provides ATR polypeptides and polymucleotides, vectors, CC methods for identifying molecules that bind the ATR and which reduce the toxicity of anthrax toxin. A claimed method for treating anthrax in a CC toxicity of anthrax toxin. A claimed method for treating anthrax in a CC toxicity of anthrax toxin a level effective to reduce the severity of between PA and ATR at a level effective to reduce the severity of CC anthrax. Suitable agents include the present polypeptide or a PA-binding CC affusion protein, a monoclonal or polyclonal antibody, a polysaccharide, a lipid or a nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Best

                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a novel method for the isolation of endothelial cells (ECs), and the identification of genes expressed in normal and tumour ECs. Tumour endothelial marker (TEM), normal endothelial marker (NEM), and pan-endothelial marker (PEM) genes are identified in human ECs. The human EC marker proteins and the polynucleotide sequences encoding them are useful for detecting, diagnosing or treating tumours as well as polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis, and psoriasis. They are all useful for inhibiting neoangiogeness or tumour angiogenesis, for inducing an immune response to tumour endothelial cells in a patient, for identifying candidate drugs for treating tumours. The present sequence represents a human TEM or NEM protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New purified human transmembrane protein, designated as tumor endothelial marker (TEM) 3, useful for detecting, diagnosing or treating tumors, polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis or

Tumour endothelial marker (TEM), normal endothelial marker (NEM), and pan-endothelial marker (PEM) genes are identified in human ECs. The human EC marker proteins and the polynucleotide sequences encoding them are useful for detecting, diagnosing or treating tumours as well as polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis, and psoriasis. They are also useful for inhibiting neoanglogenesis or tumour anglogenesis, for inducing an immune response to tumour endothelial cells in a patient, or for identifying candidate drugs for treating tumours. The present sequence represents a human TEM or NEM protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Tumour endothelial marker; normal endothelial marker; PEM; pan-endothelial marker; polycystic kidney disease; psoriasis; disease; retinopathy; rheumatoid arthritis; tumour angiogenesis; neoangiogenesis; immune response; cytostatic; antidiabetic; ophthalmological; antirheumatic; antiarthritic; antipsoriatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New purified human transmembrane protein, designated as tumor endothelial marker (TEM) 3, useful for detecting, diagnosing or treating tumors, polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Carson-Walter E,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             320
```

CC for therapeutic intervention in treating a disease associated with a described mitochondrial function. Specifically, it refers to a method for contentifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The coresent invention describes a method for identifying such proteins that can be used in the treatment of various disease associated with altered continuous mitochondrial function including diabetes mellitus, huntington's disease, costeoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial concephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy cragged red fibre syndrome (MERRF) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, anticoronulsant, antiarthritic, osteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart composition of the invention. invention relates to novel mitochondrial targets that can be used

The present invention describes a method for detecting a pancreatic concer-associated transcript in a biological sample. The method comprises contacting the biological sample with a polynucleotide that selectively hybridies to a sequence at least 80% identical to a sequence as shown in any one of Tables 3 to 25 in the specification or having the GenBank CA Accession Number AP279145. Also described: (1) diagnosing pancreatic cancer in a human or animal subject being tested, determining the CC determining the subject having a pancreatic cancer will survive, or CC determining the suitability of a subject having a pancreatic cancer for CC surgical resection therapy, (2) detecting a pancreatic cancer-associated conversatic cancer will survive; and the polypeptide in a biological sample; (3) determining the likelihood that a subject having a pancreatic cancer. A pancreatic cancer-associated transcript has cytostatic activity, and can be used in Gene and protein therapy. A pancreatic cancer-associated transcript thas cytostatic activity, and can be used in gene and protein therapy. A pancreatic cancer-associated transcript concer-associated transcript cancer associated transcript cancer associ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Detecting pancreatic cancer-associated transcript in a biological sample, useful for diagnosing or treating the disease, comprises contacting the sample with a polynucleotide that selectively hybridizes to a specific

The prognostic or diagnostic methods are useful for the early detection of pancreatic cancer or its metastases, and for monitoring the progress of disease such as during remission or following surgery or chemcherapy. The present sequence represents human tumour endothelial marker 8 precursor (TEM8), which is used in the exemplification of the present invention.

CC protein genes, and AAE01436-AAE01513 represent the proteins they encode. CC AAE01514-AAE01544 represent human secreted protein fragments or variants. CC The genes and their secreted protein are useful for preventing, treating CC or ameliorating medical conditions, e.g., by protein or gene therapy. CC pathological conditions can be diagnosed by determining the amount of the new genes. Specific uses are described for each of the 28 genes, and in a sample or by determining the presence of mutations in CC based on the tissues in which they are most highly expressed, and include CC developing products for the diagnosis or treatment of proliferative CC disorders, cancer, tumours, foetal and developmental abnormalities, autoimmune CC diseases (e.g., rheumatoid arthritis), inflammation, allergies, autoimmune CC diseases (e.g., rheumatoid arthritis), inflammation, allergies, cc cognitive disorders, kidney disorders, gastrointestinal disorders, cognitive disorders, kidney disorders, gastrointestinal disorders, cc angiogenic disorders, kidney disorders, gastrointestinal disorders, cc proteins can also be used to aid wound healing and epithelial cell cc proteins can also be used to oaid wound healing and epithelial cell cc proteins can also be used to oaid wound healing and epithelial cell cc protein of the invention can be used in alleviating symptoms associated correct of protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., cradioimmunoassays or enzyme linked immunosorbent assay (ELISA). The invention can be used in alleviating from invention of the invention of a human secreted in the invention of the invention.
                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Albumin fusion protein; therapeutic protein X; human albumin; Hahuman serum albumin; HSA; cancer; reproductive disorder; digestive disorder; immune disorder; endocrine disorder; haematopoletic disorder; neural disorder; connective disorder; cytostatic; antiinfertility; antiinflammatory; antiulcer; immunomodulator; anti-HIV; antidiabetic; haemostatic; nootropic; neuroprotective; antiparkinsonian; antimicrobial; neuroleptic; osteopathic; antiarthritic.
                                                      The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HA, also known as human serum albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and disgnosing disorders such as cancer, reproductive disorders, digestive disorders (e.g. Crohn's disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. diabetes), haematopoietic disorders, neural disorders (e.g. Alzheimer's, Parkinson's, Creutzfeldt-Jacob disease, encephalomyelitis, meningitis, schizophrenia), and connective disorders (e.g. osteoporosis, arthritis). ABG63326-ABG65518 represent albumin fusion proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New fusion protein albumin fused to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       12-APR-2000; 2000US-0229358P
